

RFID Building Management Software System

617019

GAO RFID Building Management Software System is an integrated software package combined with GAO RFID hardware providing both secure access control for residents, building staff, and parking control for the site.

GAO RFID Building Management Software System is an integrated software package combined with GAO RFID hardware providing both secure access control for residents, building staff, and so on along with parking control for the site. The system is able to provide for a variety of technology choices and combination of RFID readers and tags, for example, parking may use a UHF windshield tag and door access may use a low frequency RFID card tag. Active RFID choices are also supported. The system has a low cost of entry requiring only an everyday PC to handle people and vehicular access control for the entire building.

Benefits

Conversion from an outsourced

system to a user owned and

controlled system

Lower cost of ownership

- Limited Access to restricted areas and authorized personnel increasing security
- The ability to track and record personnel activity
- Loss prevention

RFID Building Management Software System

Features

Unsupervised 24 hour Operation

After system configuration, there is no more requirement for user input. As long as a valid, registered RFID tag is presented to the RFID reader at an access point, entry is automatic.

Web Management Interface

All registration activities can be handled through the system's Web-based interface from any location by an authorized user. RFID tags and their holders and privileges can be added, edited or removed without having to go on site.

Compatible and Combinable with all RFID Hardware

Passive low frequency, high frequency, UHF and batter-assisted semi-passive or active technologies readers and tags in a variety of form factors such as windshield tags and key fob tags can all be flexibly used together.

Group & Time Restriction Management

Access for specific groups of tag carriers, as well as, time restrictions for access is provided for. For example, building personnel and not residents may be able to access certain areas, or laundry room access can be restricted to certain times of the day.

Customizable Reporting

All card activities are stored in a database and specific, adaptable reports can be generated by specifying criteria such as date, entry point or tag holder or group names.
